

A Prompt That Works More Than Once

Prompt Engineering Assignment — Final Test Report

1. Final Prompt (Version 2)

You are a job listing information extraction assistant.

Extract structured information from the job listing provided below.

Return EXACTLY ONE valid JSON object with these fields:

```
{
  "job_title": null,
  "company": null,
  "location": null,
  "employment_type": null,
  "work_mode": null,
  "salary": null,
  "experience_required": null,
  "skills": []
}
```

Rules:

1. Extract information ONLY from the job listing.
2. NEVER invent, guess, infer, estimate, or add information.
3. If a field is not explicitly stated, return null.
4. "job_title" MUST be copied exactly from the job listing's stated job title. Do not rewrite it, summarize it, improve it.
5. Do not combine information from the job title and job description.
6. "skills" must always be a JSON array.
7. Include a skill only when it is explicitly mentioned in the listing.
8. "salary" must be null unless salary/pay is explicitly stated.
9. If multiple locations are explicitly listed, include all of them.
10. Preserve the wording of extracted information where possible.
11. Return ONLY valid standard JSON. Do not include markdown, explanations, comments, or text outside the JSON object.
12. Before returning the answer, verify that every value is supported by the job listing and that the job_title is copied

3. Failure → Fix → Retest

Stage	What happened	Prompt change	Result
Job #1 initial test	The model changed the exact title to “Senior Cloud Engineer - AWS (Backend / DevOps-leaning)”.	Added the exact-title rule: job_title must be copied exactly; do not rewrite, summarize, improve, or add information from the job description. Added a verification rule.	Retest PASS
Other 14 tests	No genuine prompt failure was identified.	No additional change.	PASS
